

Foundation Of Operations Research
Theory

Christian Rossi

Academic Year 2023-2024

Abstract

Operations Research is the branch of applied mathematics dealing with quantitative methods to analyze and solve complex real-world decision-making problems.

The course covers some of the fundamental concepts and methods of Operations Research pertaining to graph optimization, linear programming and integer linear programming.

The emphasis is on optimization models and efficient algorithms with a wide range of important applications in engineering and management.

Contents

1	Introduction	2
1.1	Definition	2
1.2	Variables	3
1.3	Constraints	3
1.4	Objective functions	3
2	Graph and network optimization	4
2.1	The terminology of networks	4
2.2	The minimum spanning tree problem	5
3	Linear programming	7
4	Integer linear programming	8
